

Information about our exhibition samples

NeoCan

The uniqueness of the NEOCAN lies in its manufacturing process: it uses neither natural gas nor any other fossil fuel, which takes sustainability and resource conservation in production to a whole new level.

This has been achieved through external lamination including offset printing. This process can be achieved using a white PET film, which is then printed with UV ink on the printing line (MetalStar 3) and then coated inline with the UV varnish and dried. This process was applied using UV technology from IST Metz.

Manufacturer:

Blechwarenfabrik Limburg

Machine:

König & Bauer MetalStar 3
4 Colours + UV Inline Painting

ESuitability: 3-piece tinfoil packaging
